Abstract

Through this research work evaluating the various scientific background of vital force with different parameters to understand the dimension of flow of energy in respect of equilibrium to manifest the state of health. As we know this energy is spiritual, autocracy, automatic, dynamic in the living organism this energy exhibit in the various dimensions along with axis of deviation in correspond to external stimuli.

Keywords: Scientific approach, vital force, dimension of flow of energy

Introduction

The phrase vital force refers to the existence of animating invisible energy throughout the universe, whereas vital principle refers to a specific type of power carried by the material body [1]. Dr. Hahnemann defines "vital force" as "life force." Initially appeared in the 5th edition of the Organon of medicine, and the word "vital principle" has taken its place in the Because of the Vital force material, the 6th edition of Organon [2]. Without the body's ability to survive, grow, and reproduce, the anatomical body is incapable of performing any function and cannot protect itself from decays. It has a spirit-like dynamism to it. It is the type of energy that sustains life. This power is every portion of the body contains it. It is the fundamental factor. Accountable for maintaining a lively state of the body while Disease and health [3]. It is not visible to the naked eye. Its ability to function in a harmonious manner indicates that it is in a state of health. There are so many arguments against this concept that it is nothing. However, much work has lately been done to examine it. Vitality in the body and how the body functions in a healthy state, there is a harmonious way. According to current research concludes that there is some energy in the body but there will be no strategies for calculating this. Prior to 200 years back in the day, maestro Hahnemann stated unequivocally that it is the energy by which body performs physiological functions.

Milgrom 2006

Vital forces-Quantum theory: The previously informed quantum theory of concepts and entanglement attempt the therapeutic process model. Later, a mathematical model based on homoeopathy is developed by weak quantum theory (WQT) and patient- practitioner-remedy (PPR). To widen the scope of PPR, quantum field theory (QFT) is applied. In this case, the patient, practitioner, and remedy are interacting in a quantum-like field in which the patient and practitioner are expressed in terms of a quantum matter field while the remedies and disease are treated as a quantum interaction field. The quantum field was associated with vital force. As a result, vital force can either build or destroy a quantum field. If it breaks, sickness develops, and homoeopathic medicines are offered to restore the fractured quantum field. The procedure continues. The spacetime feynmann diagram visualizes the practice and forces of quantum matter and force field in order to restore the broken symmetry in homoeopathy curative therapy. It can be depicted using feynmann diagrams. It finds that there is a parallel between homoeopathy and quantum theory that can be used to model the homoeopathy process.

Knowledge, knowledge of patients, knowledge of remedy, as mentioned in the Organon of Medicine 6th edition (aph. 3, 4, 5), and tells us about entering and exiting the disease space.

We examine the patient and obtain a geometric figure, which leads to the path of cure by integrating the patient and medical perspectives. The semiotic geometry depicts the physician and patient perspectives, which can be perceived from the outside in the physician viewpoint and from the inside in the patient perspective, both of which lead to the path of cure [5-7].

Milgrom 2004

Theory was assumed on Cartesian theory it applies double blind placebo control trials were conducted, then we get the patient's process & it correlates with the gyroscopic idea. This paper was produced to investigate the effects of homoeopathic medicine, which is today regarded as a placebo in the modern world. In prior studies, non-locality, complementarity, and entanglement were used to explain homoeopathy. According to Dr. Hahnemann, vital energy was adequately explained, but it cannot be seen or perceived with the human eye, hence there are numerous challenges to homoeopathy by modern medicine. This report was based on multiple metaphor studies, in which they hypothesized that a gyroscope was full of energy as it moved against an item, and that created this. They have their own spin (angular momentum) based on the energy they received. If something gets in the way of the gyroscope rotating, it slows down (has less angular moment) and shows modest effects. When this concept was correlated with Homoeopathy, when a person becomes ill, we prescribe a well-suited homoeopathic remedy based on their susceptibility, which is acted on the vital force of the person, but if the potency selected was not correct according to the conventional laws of homoeopathy, it reduces the effect of energy transformed in the patient’s body in the form of homoeopathic remedy. According to Milgrom, they explain this process in terms of electrons (which are bound with energy) and the energy in the particles that cover their route and revolve around the electron [19-25].

Vital forces: Spin concept

They investigate the concept of spin, which can be utilized as a metaphor for understanding vital force operation. This the idea originates from nuclear magnetic resonance (NMR). Look into the differences in the characteristics known as spin - spin. Relationship with time to comprehend the notion of water between non-toxic and homeopathically made (diluted and succussed), homoeopathic prepared (diluted only) solutions. There is none. There were differences between homoeopathic and non- homoeopathic treatments. Homeopathic remedies are solutions that have been produced with care. The vitalist ideas that they are theoretically based on numerous CAM. The existing medical model is invalid. The ancient concept of the modern complexity altered the vital power theory. As a result, the gyroscopic metaphor presented here, might be it’s a good place to start thinking about vital force [14].

A Gyroscopic Model of the Vital Force

On the basis of the aforementioned hypotheses, it is conceivable to conceptualize the VF as behaving like a gyroscopic entity. This uses the well-known characteristics of gyroscopes and spinning tops to demonstrate how the VF reacts to illness and treatments [11]. As a result, once a spinning object is set to a high speed, the angular momentum produced tops and basic gyroscopes to stand upright in relation to the gravitational pull of the Earth field and will firmly resist any lateral forces from the outside that attempt to topple the gyroscope. It will start to sway about as it spins if those forces are powerful enough. Before the gyroscope settles back on its axis in its upright posture. Moreover, any item thrust outward while being fast-spinning flywheel-attached. The flywheel as again wobbles, but this time tilts over and turns gently around a Horizontal axis. Precession is the term used to describe the sluggish rotation of the gyroscope's spinning axis. The slower the flywheel spins, the quicker the precession of the entire gyroscope becomes, until it eventually topples over completely. A rotating gyroscope resists rotation lateral forces are much less. Compared to a completely upright (multidimensional) gyroscope, a healthy VF with one significant exception, a flywheel that is spinning quickly: variations in the VF "gyroscopic" Precessional angular velocity occurs in jumps rather than continuously, i.e., it has been quantized. When it is envisioned as physical but not perceptible.

Conclusion

After reading and learning about vital force in homoeopathy, it says that vital force is a prime unique life force or energy which possesses in all living being. Vital force is power which maintain the harmony of your body and which preserve the state of health and well-being. When vital energy is deprives, the entry of disease in body occurs. Vital energy also defence body from being sick. As vital force is spiritual, dynamic power which cannot seen but it is felt and perceived. Homoeopathy medicine gives power to vital principle to come in health state and then remove disease from body.

As we seen many theories like quantum physics theory, Cartesian theory and spin theory it shows that there is an energy which we can to seen in material form but the force is there and how it affect things around it. As it is difficult to back time regarding Explain vital force, many people don’t except this theory but now with advancement of theory like quantum physics its gives evidences regarding vital energy, which was already Dr. Hahnemann was told. Invisible energy was also discussed in Hindu literature and the Rieki system of healing also introduced in early 20th century in Japan, which is built on energy healing. This gyroscope instrument help to provide evidences on the theory of Vital force or vital principle. As from studying of all this theories it is given positive review on theory of vital energy. In homoeopathic medicines which are prepared with trituration and succession methods, it poetized and became high in dynamic energy, which will match with Person’s own dynamic energy-that is vital force and getting charged with this dynamic energy the vital principle which is also dynamic in nature, vital force helps to body to come back in healthy state. The quantum theory and spin theory helps to scientifically proven about dynamic energy.
